

#### Other critical information about Vaccinations that needs to be known

- News reports which can be found on youtube include stunning censored interviews conducted by medical luminary Edward Sherwin for WGSH public television (Boston) and Blackwell Science which were originally cut from The Health Century that is to say, huge liability the admissions that Merck drug company vaccines have intentionally been injecting cancer viruses (SV40 and others) to people worldwide. Merck was asked to recall 1.2 million doses of infant Hib vaccines because they were contaminated with SV40 and other lethal adenovirus (cancer virus).

- According to Dr. Andrew Moolman, ALL vaccines elevate the risk of atherosclerosis (a form of stroke), which can then often lead neurological problems, including autism. He shows that vaccines promote blockages to small blood vessels via clotting and elevated white blood cell levels, which can then damage human nerves, and the like. Please think twice before accepting vaccines for yourself or your children.

- A shocking investigation conducted by researchers and doctors worldwide was confirmed by a piece from CBC, the national news agency in Canada that Polio vaccinations in the 1950's were contaminated with AIDS, not by mistake but because of the back of a sexual supremacist bio-engineer. They traced the material back to a lab out of Texas which they believe has a conspiracy with place

- As CRN reported and many conclusive studies are finding that Gardasil, the Cancer Vaccine for prevention of Cervical Cancer in women (HPV Vaccine) is causing severe auto-immune diseases, neurological breakdowns, seizures, and illnesses that are not even classified yet which cause central nervous system dysfunctions. Gardasil has caused over thousands of negative reactions and even death. Some illnesses are so bad that healthy girls, some who were classleaders and athletes, CRN reports caused complete breakdowns in the girls to wheelchair confinement and morphine prescriptions to end with severe pain.

- For years a growing debate over the safety of Thimerosal in some vaccines as a preservative may have side effects. Thimerosal, also known as Merthiolate, is a mercury containing compound also sometimes used as a local antibacterial agent. Lethal Mercury poisoning can be caused to even extremely low doses and studies are showing possible links to neurological damage and some doctors are making the case that it might be one of the top causes of Autism. For a long time, lead was thought to be found in small parts per million but studies showed that it caused lethal reactions and neurological damage in rats and humans which is why lead was taken out of these products, even at the small parts per million quantities they were present. Why is Mercury in vaccines?
